

PRECISION CUTTING TOOLS, INC.

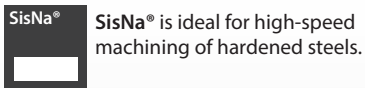

DRILLS

HIGH-PERFORMANCE DRILLING

2 Flute - Single Margin Carbide Drill High-Performance Drilling

The NXC Series is designed specifically for nickel-based applications. The drills feature double-margin geometry, coolant holes, a 15° helix and 135° point geometry. In addition, the drills include a 45° protective corner chamfer, for increased cutting edge protection and longer tool life.

Benefits:

- No pecking cycles required
- Improved chip evacuation
- Increased cutting edge strength
- Longer tool life
- High wear and oxidation resistance

Applications:

- Nickel
- ...and its alloys

- 1. 135° Point Geometry**
For advanced drilling capabilities
- 2. Coolant Holes**
Maintains strength at increased operating parameters
- 3. 45° Protective Corner Chamfer**
Cutting edge protection and longer tool life.
- 4. Double Margin**
Improved drilling stability and smooth surface finish.
- 5. SisNa® Coating**
High-speed applications of hardened steel (>54HRC)
- 6. Available: 3xD – 30xD**
High penetration capabilities

Proudly Manufactured in the
United States of America
